

The FAA Safety Team presents:

Winter Flying in the Finger Lakes! (NOTE TIME CHANGE)

Few hazards scare pilots more than icing, and rightfully so. Every year in the Finger Lakes we have icing incidents and accidents. But if we didn't fly on days when icing was in the forecast, we wouldn't get very far from the local airport. Featured speaker Dave Parkins is an instrument rated private pilot and FAA Designated Engineering Representative specializing in icing research. He will provide some guidelines on operating in icing conditions and the characteristics of some deicing and anti-ice equipment. The potential for icing exists any time there is moisture (clouds) and freezing temperatures, which is nearly every winter day in parts of the country. Does that mean you can't fly? Attend this informative seminar and get some practical guidance.

Directions: Follow State Route 13 North from the City of Ithaca under 2 overpasses to the top of the hill. The next light is Warren Road, turn left then your first right (about .5 mile) is Brown Road (airport entrance). Go straight to the red brick building with the airport beacon on the roof (this is the airport administration building).

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
